INTRODUCTION

Robustel's EV8100 is an advanced elevator voice gateway that supports voice transmission over VoIP and VoLTE, enabling seamless communication between a cellular network and the elevator's intercom system. This next-generation device offers multi-interfaces and allows for seamless remote monitoring and management of the elevator's communication system, making it easy to address any issues or malfunctions quickly and efficiently. With its advanced features and robust design, the EV8100 is a reliable and essential safety solution for any modern building.

EV8100 supports Docker for easy deployment of applications and benefits from 'RobustOS Pro' – Robustel's latest Linux Debian bullseye based router OS with enhanced cybersecurity, advanced GUI and a myriad of software features including VPNs, Smart Roaming, SMS remote control and more.

RCMS is Robustel's free router monitoring service that is fully compatible with the EV8100. It allows customers to see a location overview of their routers quickly and simply on a map. Features such as data usage, signal strength, current network and much more can then be viewed on a per router basis. Over-the-air updates are supported for Firmware, router configuration and Apps serving as essential "insurance" if anything was not quite right during deployment.
